The last few decades have seen a growth in pediatric endocrinology services across the country. The training in these specialized services has also evolved across different centers in the country, with the availability of a defined curriculum, national and international workshops, and assessment procedures.

The book titled “Pediatric Endocrinology – An examination-oriented simplified textbook,” published as part of Scott’s PEDIA-TRICKS Specialty Series, authored by Hemchand Krishna Prasad and Sunkara Naga Jyothi beautifully captures the essence of pediatric endocrinology. The book covers common endocrine disorders arranged as a total of nine chapters. The learning objectives have been enumerated for each chapter. Each chapter begins with a brief description of physiology or a basic clinical approach. The detailed management protocol, monitoring schedule, and long-term follow-up are then discussed with details of individual conditions. A point-wise mention of different signs and symptoms of diseases provides a ready reckoner for the disease.

The book provides simplified algorithms for diagnosis and management. The text is arranged in a simple format for easy reference. The illustrations and tables are printed in attractive colors ensuring the important points get highlighted. This style provides to be a handy refresher material in a busy clinic or for preparation of examination.

A few issues that are unique for pediatric case management like drug administration in neonates and identification of signs in sick children have also been highlighted.

The book provides a complete snapshot of pediatric endocrine disorders and their management. It will be of great use for pediatric postgraduates and pediatric endocrine trainees. The book is available online through orders at [parasredkart.com](http://parasredkart.com) (discounted price of INR 375).

I wish the authors best wishes for the launch and dissemination of this book.
